

Applying pvc lettering

A few tips !

Clean the area thoroughly making sure you don't leave any spots of oil or grease. Position the sign carefully then tape the top edge in place along its full length

You may need help now to apply a large sign !
Using the tape as a "hinge" fold the sign upwards and remove the release paper from underneath the lettering.

Using a flat piece of plastic, smooth the lettering in to place working downwards. Hold the bottom of the lettering back to make sure it does not stick before you reach it with the plastic.

Peel off the application tape to reveal your sign
Finally, using a sharp pin or a craft knife burst any large air bubbles and smooth the lettering down with your finger
